

Benchmarking Plan for Project Intra Todo- [Unnamed group]

I. Introduction:

The development of a Todo extension directly integrated into the Intranet system of Epitech aims to simplify and enhance the process of project planning for students. With this extension, the goal is to eliminate the requirement for students to navigate through various external platforms for managing their tasks. Instead, they can use the extension within the Intranet itself.

By creating a Todo extension within the Intranet, students benefit from a centralized and user-friendly interface. This reduces the complexity of remembering which external site or tool to use for task management. The process becomes more straightforward, allowing students to focus on their projects without the need to switch between different platforms.

The extension is designed to integrate with Epitech's Intranet in a cohesive manner, ensuring a user-friendly experience. Students can utilize the extension to add tasks directly to their Intranet Todo, facilitating a more efficient project planning process. This not only saves time but also enhances the overall convenience of managing tasks within the familiar environment of the Intranet.

In summary, the Todo extension serves as an addition to Epitech's Intranet, providing students with a dedicated and integrated solution for project planning. The goal is to enhance the user experience by simplifying task management and eliminating the need for external platforms.

II. Benchmarking:

- Integration with other collaboration tools and services to enhance workflow efficiency.
- Increasing emphasis on remote work and collaboration tools to support distributed teams.
- Continuous improvement in user experience and interface design.
- Integration of automation features to streamline task management and reduce manual effort.
- Enhanced security features to address the growing importance of data protection in project management tools.

III. Pros and Cons:

Pros	Cons
Specific to Epitech students	Doesn't have access to Epitech site, for automatic project names
Everyone has access, no need to sign up to a website	Pretty manual for creating of tasks.
No need for external tools	Not collaborative (yet)

IV. Competitors:

Trello (<https://trello.com>)

Smart sheet (<https://www.smartsheet.com>)

Monday (<https://monday.com>)

Asana (<https://asana.com>)

V. Offers given:

Free: offers basic functionalities with limited storage per file.

Standard: more functionalities than free

Premium/Enterprise: even more functionalities with views per page, and administrator privileges
