1. Contexte of the Internship

1.1 General presentation of the company

The University of Geneva (UNIGE), standing proudly at the 49th position in the 2023 Shanghai Academic Ranking, is a vibrant and diverse institution. It boasts a student body of 16,908, a mosaic of backgrounds that includes 40% from Geneva, 20% from other Swiss cantons, and a substantial 40% from the international community. Similarly, the 6,310 staff members contribute to the institution's richness, with 53% being from Geneva and other Swiss cantons, and a significant 47% representing the global workforce.

UNIGE is home to 9 faculties, 14 interdisciplinary centres and institutes, and 8 national research poles, creating a fertile ground for the exploration and advancement of academic knowledge. The university is an active contributor to scholarly discourse with over 3,300 annual publications. Furthermore, it extends its reach into the professional realm by offering 280 continuing education programs, attracting 10,000 participants. This commitment to continuous learning results in the issuance of 4,760 diplomas, a testament to UNIGE's dedication to fostering academic and professional growth. This includes 59 bachelor's degrees, 97 master's degrees, and 85 doctorates, showcasing the breadth and depth of its educational offerings.

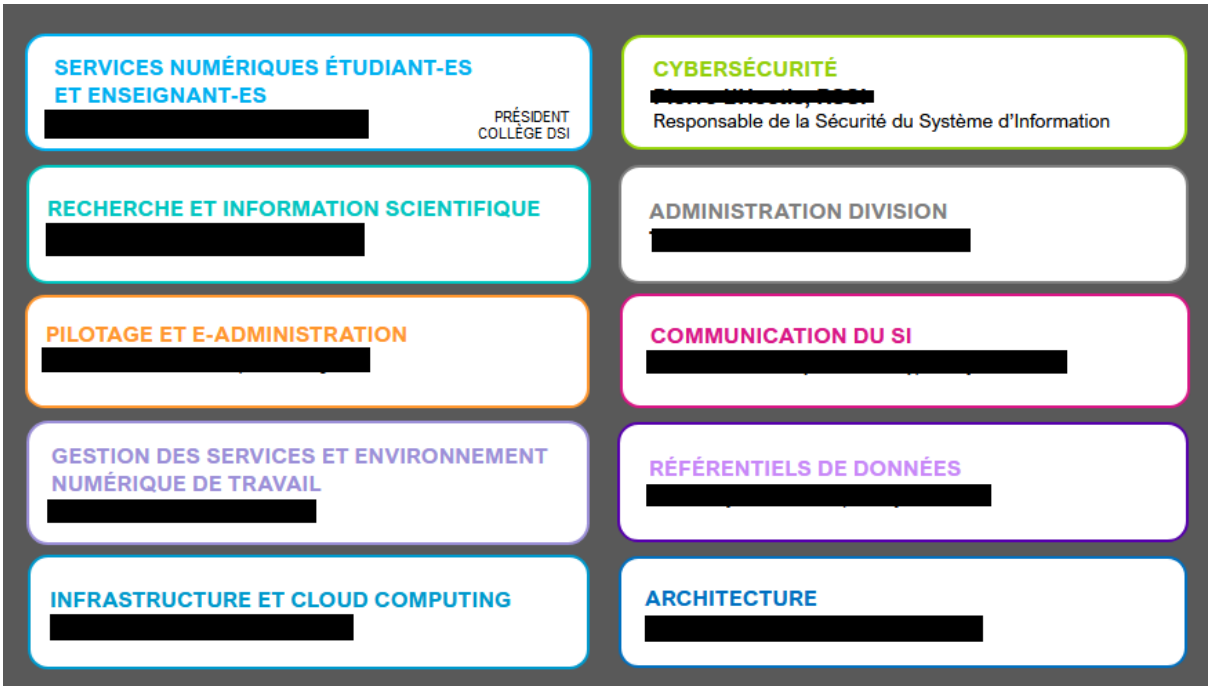

Beyond its academic pursuits, UNIGE actively participates in nearly 250 European Union programs, emphasising its commitment to international collaboration and the exchange of ideas on a global scale. This rich tapestry of achievements and engagements solidifies UNIGE's standing as an institution at the forefront of academic excellence, contributing not only to the intellectual landscape but also shaping the future through education and collaborative initiatives.

1.2 Specificity of the company & my role

The Information Systems Directorate oversees the Institutional Information System, aligning with the vision of the Digital University and supporting the missions, management, and evolution of the institution. It leverages the diverse expertise of the Information Systems and Communication Technologies (IS/ICT) Division, which it leads. The Directorate collaborates closely with all partners to provide users with digital services and IT offerings based on modern technologies and a robust infrastructure.Structured into 5 domains and various cross-functional roles, the Directorate plays a crucial role in advancing the university's digital capabilities and ensuring the efficient delivery of technological services.

The GSent (Gestion des Services numériques et des Technologies de l'information) is a pivotal component within the Information Systems Directorate. It plays a key role in implementing the vision of the Digital University. GSent is responsible for coordinating and managing various digital services and information technology functions. It collaborates closely with the STIC Division (Système et Technologies de l’Information et de la Communication) to ensure the provision of user-centric digital services and IT solutions. The emphasis is on leveraging modern technologies and maintaining a high-performance infrastructure to support the institution's goals and evolving needs.

During my internship, I held the position within GSent, of a "Stagiaire Administratif." This role involved close proximity with the CAD (Centre des Accueils et Demandes) but also multiple other services in the DiSTIC. Under the capable supervision of Elisabeth Carabeli Lancon, who holds the position of Head of the CAD, I gained valuable insights. This experience provided me with a firsthand look into the intricacies of managing and coordinating tasks and a team within a dynamic organisational setting.

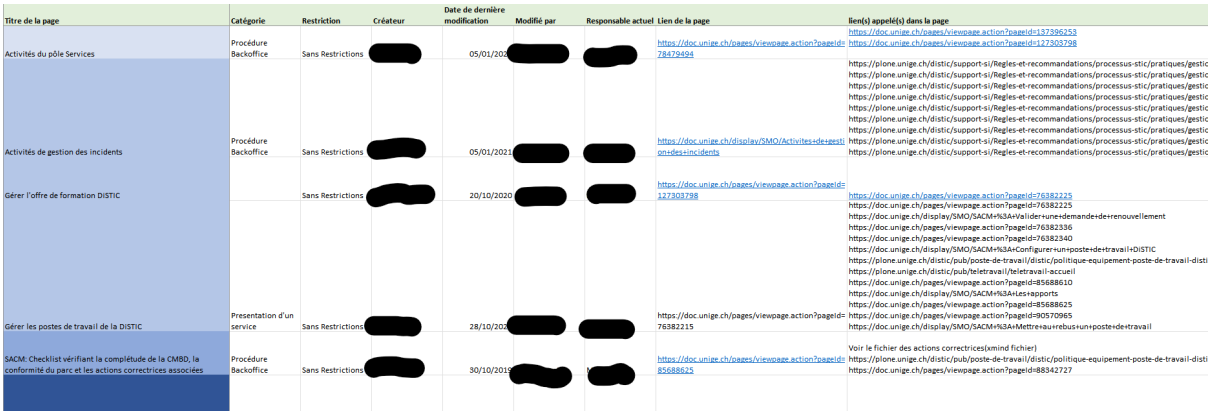

2. My Tasks

2.1 Recovery of confluence files to transfer

The University of Geneva has various locations and sites where documents are stored for different faculties and independent projects. My initial mission was to retrieve everything from 'Confluence,' a collaboration and documentation software developed by Atlassian, enabling teams to create, share, and collaborate on content like wikis, documents, and project plans. This was necessary as they aimed to transfer the documents from Confluence to OneNote.

I initially created two Excel files, checking all the documents, recording various details, identifying faulty links, and addressing potential migration issues:

During the completion of the Excel documents, I actively participated in meetings, presenting the progress of the document to both my supervisor and the Head of Gsent, Marc Vasset.

While working on the Excel sheets, I didn't encounter significant difficulties except for occasional challenges with links leading to external pages or pages I didn't have access to. For this I had to refer to my peers for help.

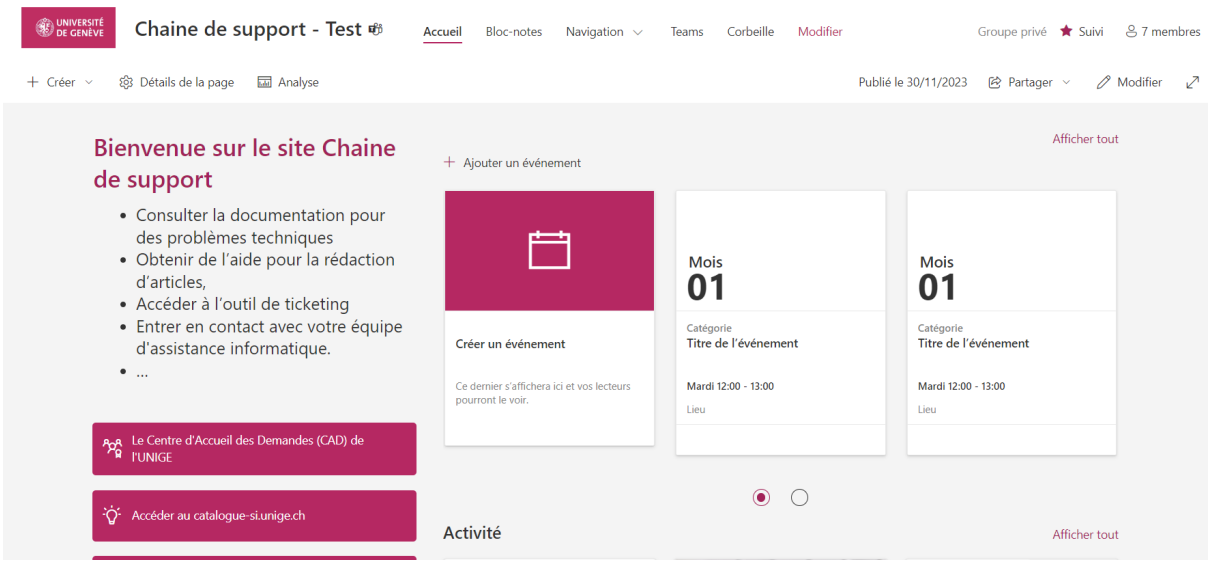

Presently, the documents originally in Confluence have been transferred to both SharePoint and OneNote, depending on the document's owner and the designated storage location.

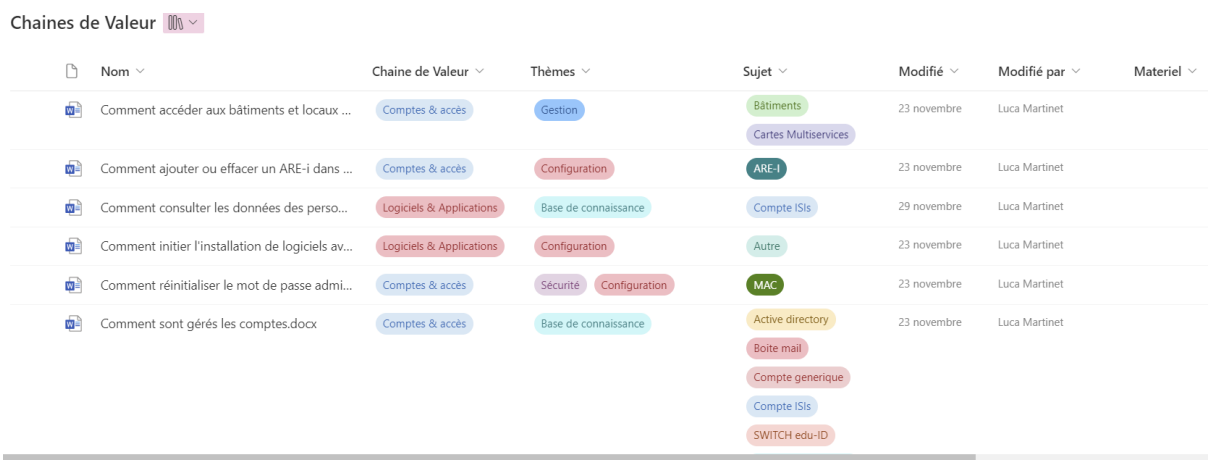

2.2 Discovery of “SharePoint” for possible migration of “Plone 4.3”

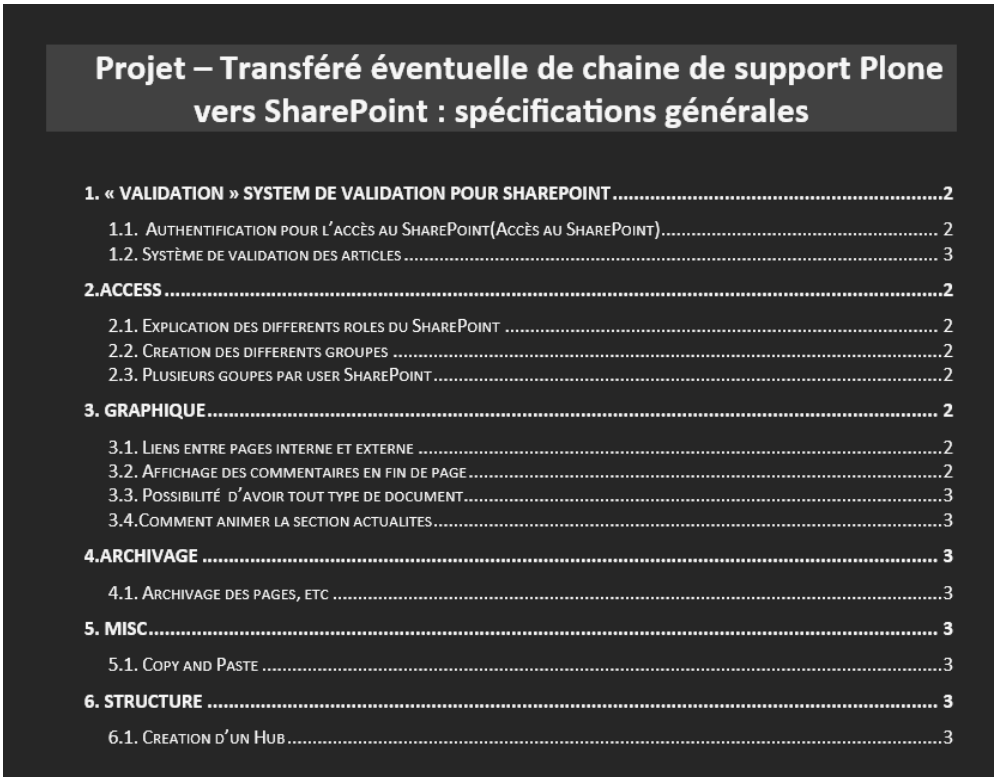

The University employs Plone as a site to actively assist both its students and collaborators, hosting approximately 1000 active documents spanning various topics. Specifically, the division I am a part of utilises 'Chaine de Support,' frequently accessed by 'CI’s' assisting students, professors, and collaborators across different faculties at UNIGE. Seeking a more effective alternative to the ageing Plone platform, my supervisor, Elisabeth, and Marc Vasset aimed to find a solution as data revealed that the provided documents were seldom used (around 3000 views per year, significantly less compared to the 1 million yearly views in other divisions).

The proposal was to transition to SharePoint as the next potential collection site, given its inclusion in the Microsoft 365 package, making it highly esteemed for document management and storage. I was granted a sandbox site to explore and test the various

functionalities that SharePoint offers. In tandem with exploring solutions and possibilities, I created “Comment Faire’s”, tutorials on different aspects of SharePoint, ranging from permission management to basic document and page creation. These were important because many of the documents that ‘Chaine de Support’ harbours are considered confidential. They are only accessible by certain members and often not accessible from outside of the campuses. Here are screenshots of the Home page, an example of how documents can be stored and classified in SharePoint and my specifications document.

Projet – Transféré éventuelle de chaine de support Plone vers SharePoint : spécifications générales

1. « VALIDATION » SYSTEM DE VALIDATION POUR SHAREPOINT 2
1.1. AUTHENTIFICATION POUR L'ACCÈS AU SHAREPOINT(ACCÈS AU SHAREPOINT) 2

3.3. POSSIBILITÉ D'AVOIR TOUT TYPE DE DOCUMENT 3
3.4.COMMENT ANIMER LA SECTION ACTUALITES 3
4.ARCHIVAGE 3
4.1. ARCHIVAGE DES PAGES, ETC 3
5. MISC 3
5.1. COPY AND PASTE 3
6. STRUCTURE 3
6.1. CREATION D'UN HUB 3

While navigating through SharePoint, I encountered several challenges—both technical and related to time management. Since I was essentially learning SharePoint on my own without prior knowledge, I often sought help from forums and the official Microsoft SharePoint documents. Fortunately, I connected with Christian Russo, a specialist in various technologies, including SharePoint. His guidance proved invaluable, and I'm grateful for his patience and assistance.

Additionally, setting goals and managing time efficiently posed a challenge. Elisabeth, my supervisor, played a crucial role in this aspect by organising weekly meetings to define goals for the week, drawing on our insights on the time required. This has significantly enhanced both my professional and personal time management skills.

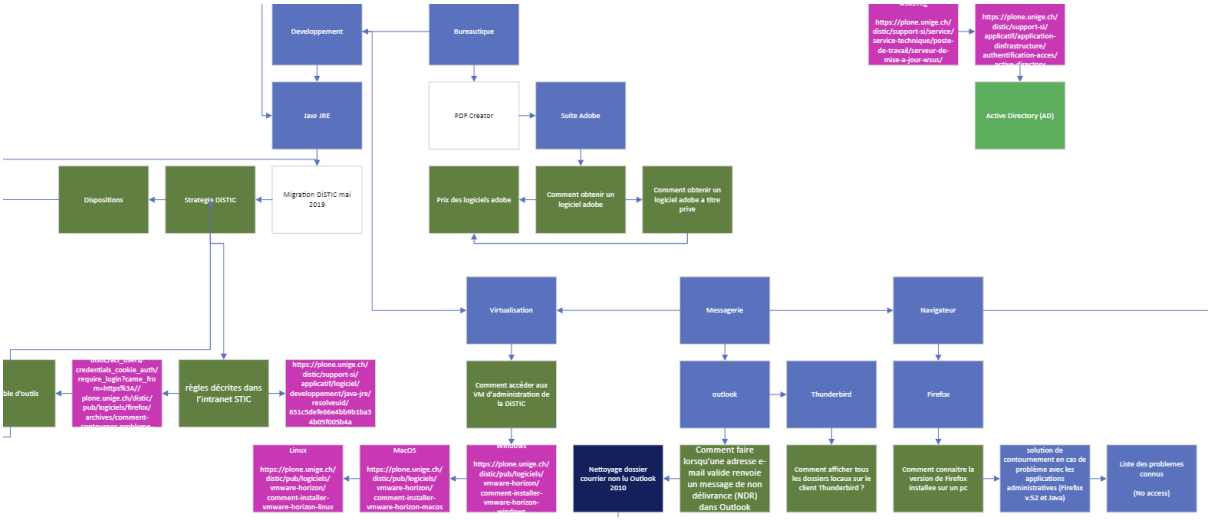

As of now, the project is ongoing, with Elisabeth and Marc yet to finalise their decision on the migration and the potential shift to SharePoint. I conducted a case study comparing SharePoint and Plone and delved into what SharePoint has to offer. Through presentations of my work, I hope to have raised awareness of the differences between the two platforms and the possibility of a successful migration.

2.3 Creation of a tree structure of UNIGE site “Plone”

The UNIGE's Plone site, an extensive repository spanning all areas of the university, prompted the need for strategic planning in the face of a potential migration. To address this, I was tasked with creating a detailed tree structure that captures the site's expansive hierarchy. This visual roadmap serves as a comprehensive guide to navigate the current layout but also as a foundation for decision-making in content organisation. Here is a birds-eye view:

A close up:

Elisabeth's request for the creation of a new organisational structure stems from the challenges posed by the current organisation of Plone. Over the past decade, this existing storage system, not originally designed by her, has resulted in widespread dispersion of information and occasional misplacement. The accumulation of data over the years has led to a clustered and less efficient arrangement. In response to this, I was tasked with creating a visual representation of the actual structure to help her create a more effective hierarchy.

Once again the only difficulties that i faced were getting access to certain areas but also how to classify different documents, if i should indicate if they are word, pdf, exe, etc…

2.4 Discovery of “Plone 6.0” for possible migration of “Plone 4.3”

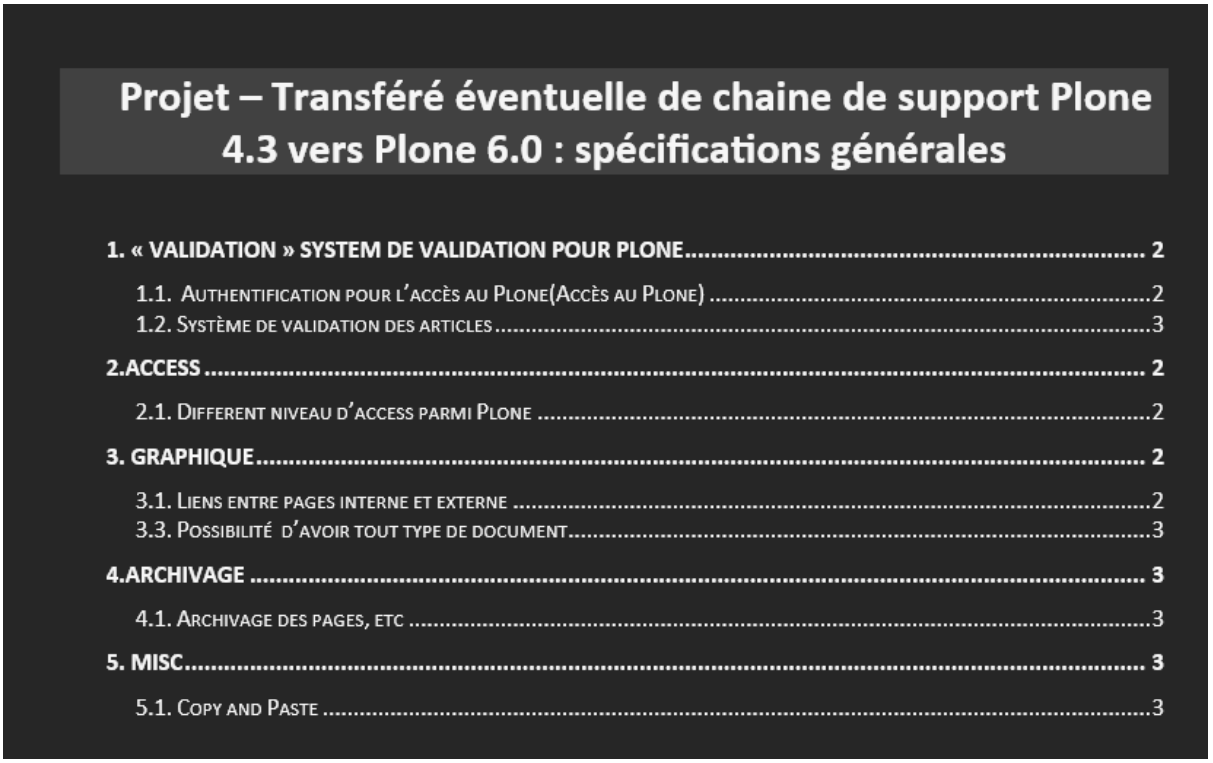

While exploring SharePoint, Elisabeth, Marc, and others held a meeting with a representative from Plone, during which they discussed the possibility of migrating to another platform. The suggestion arose to transition the site to a newer version of Plone, moving from the current Plone 4.3 to Plone 6.0. This development coincided with the final stages of my exploration of SharePoint. Consequently, I initiated an examination of Plone 6, specifically both the visual classic and visual normal versions.

Due to the time constraints, the migration lead was unable to create a sandbox, requiring me to utilise the demo sites available, resulting in the loss of progress daily. I adapted the specifications document originally created for SharePoint to assess the disparities between Plone 6 and the older version, Plone 4.3.

In the case of Plone 6 visual classic, the interface closely resembled the older Plone version, both visually and functionally. While offering similar basic functions, it also provided the flexibility for custom-coded add-ons.

Conversely, Plone 6 visual normal exhibited a departure from the older versions. Embracing a more simplistic style, akin to SharePoint's visual aspect, it retained the capability to incorporate custom add-ons if necessary.

I created a specifications document retaking what I already has as a base for SharePoint but for Plone:

Projet – Transféré éventuelle de chaine de support Plone 4.3 vers Plone 6.0 : spécifications générales

1. « VALIDATION » SYSTEM DE VALIDATION POUR PLONE 2
1.1. AUTHENTIFICATION POUR L'ACCÈS AU PLONE(ACCÈS AU PLONE) 2
1.2. SYSTÈME DE VALIDATION DES ARTICLES 3
2.ACCESS 2
2.1. DIFFERENT NIVEAU D'ACCESS PARMI PLONE 2
3. GRAPHIQUE 2
3.1. LIENS ENTRE PAGES INTERNE ET EXTERNE 2
3.3. POSSIBILITÉ D'AVOIR TOUT TYPE DE DOCUMENT 3
4.ARCHIVAGE 3
4.1. ARCHIVAGE DES PAGES, ETC 3
5. MISC 3
5.1. COPY AND PASTE 3

Using both the Specifications and personal testing i created an Excel document basically comparing each version between each other. (SharePoint, Plone 4.3, Plone 6 classic, Plone 6):

Thèmes	Fonctions	SharePoint	Plone 4.3	Plone 6 v 5	Plone 6 v 6
Validation		Option "M'avertir" ou mise en place d'un powerautomate pour gérer un workflow	Processus de validation développé en interne	à voir (normalement pas de changement)	à voir (normalement pas de changeme
Accès		2 niveau d'accès: possibilité d'avoir un accès général au niveau site, puis aussi possibilité d'avoir un accès niveau item(document, page, liste, etc...)	L'accès est configuré par grouper qui donne accès au site avec des droits d'administrateur, lecteur, rédacteur, etc...	à voir (normalement pas de changement)	à voir (normalement pas de changeme
Graphique					
	Thème / Template	OUI	OUI	OUI	OUI

	googelisable	NON	OUI, sur les pages	OUI, sur les pages	OUI, sur les pages
	recherche dans les documents(PDF, Word, etc...)	OUI	OUI	semble être possible avec un add-on	semble être possible avec un add-on
	recherche par mots clé	OUI	OUI	OUI	OUI

In our exploration, we discerned that the optimal choice between SharePoint and Plone 6 (Classic or Normal) hinges on the specific preferences of Elisabeth, Marc, and the CI's, given the distinctive offerings of each platform. SharePoint emerged as a visually appealing and intuitively designed solution, featuring a robust search engine. However, its drawback lies in the limited ability to personalise text without much leeway of custom add-ons, and a completely different view on how to handle permissions. On the other side of the spectrum, Plone 6 Classic, reminiscent of the existing Plone 4.3 version, presents an intriguing option. It combines the advancements of Plone 6 while maintaining familiarity for users, ensuring a smoother transition. In addition all permissions created during Plone 4.3 should normally merge over. Meanwhile, Plone 6 Normal adopts a presentation style akin to SharePoint. Despite its simplicity, it retains the essential capability for custom-coded

add-ons, akin to the current Plone. This duality offers a unique advantage, simplicity for routine tasks while allowing for the incorporation of more complex elements when the need arises, especially pertinent for intricate text writing and specific documentation requirements. This nuanced understanding of the platforms facilitates a more informed decision-making process for the forthcoming migration. Since the sand-box has not been created I could only show examples in screenshots, or live demos that were limited to essentially text and page setups.

With the end of my internship, the ultimate decisions regarding which solution to adopt will unfold later in the next year. However, I've taken the initiative to offer a preliminary glimpse into the complexities of each option, explaining the distinctive features, merits, and drawbacks inherent in SharePoint, Plone 6 Classic, and Plone 6 Normal. This endeavour aims to provide a comprehensive understanding for the users involved, shedding light on the nuances that may influence the final decision-making process. By presenting practical examples, I've tried to create a foundation for informed reflection, ensuring that the ensuing choices align seamlessly with the organisational goals and user preferences.

2.5 Testing of 2 future websites for UNIGE

While I was handling other tasks, I took on the responsibility of testing two upcoming websites that are still in development: "Portail des Candidatures" and the "Horaires des Cours." Essentially, my role was to ensure these platforms were working smoothly and meeting the necessary standards before their official launch.

Portail des Candidatures

Aurélie Schröder asked me to check for any errors in the English but also if there were any possible bugs apparent. I assumed the responsibility of conducting a thorough linguistic review of the English content, leveraging my prior residence in England and attendance at a public school until the age of 13 to ensure linguistic accuracy. My focus extended beyond conventional grammatical checks, encompassing a vigilant examination for potential sources of confusion or ambiguities, while also identifying and addressing bugs in a software framework. The site is getting ready for its official launch in January, positioning itself as the principal platform for individuals to enrol and participate in the University of Geneva (UNIGE).

Horaires des Cours

I was invited by Sebastien Champenois to assume the role of a user and provide comprehensive feedback during the testing phase of the site development. My unique perspective as a representative from a different university was considered valuable in offering a fresh and distinct viewpoint. The development team operated in three-week sprints, punctuated by regular reviews at the conclusion of each week. Throughout this iterative process, I actively participated in four of these review sessions, contributing not only as a tester but also as a source of diverse insights and potential ideas. By assuming the user's stance and leveraging my distinct background, I aimed to enhance the robustness of the site, ensuring its functionality aligns with the expectations of a broader user base. This site will also be launched in 2024 but I don't know the exact date.

3. Software Used

3.1 Business software

3.1.1 Microsoft 365

Sharepoint

SharePoint is a Microsoft-developed web-based collaboration platform designed for effective content management and team collaboration. It serves as a centralised hub where users can create, share, and collaborate on documents, projects, and tasks in real-time. SharePoint facilitates document version control, workflow automation, and the creation of intranet and extranet sites, offering customizable and integrated solutions. With robust security features and seamless integration with Microsoft Office applications, SharePoint is widely utilised across various industries to streamline communication, enhance teamwork, and optimise information management within organisations.

Outlook

Outlook is a widely used personal information management application developed by Microsoft. It primarily functions as an email client, allowing users to send, receive, and organise emails. However, Outlook is a comprehensive tool that goes beyond email management. It includes features such as a calendar for scheduling appointments and events, a task manager for creating to-do lists, and a contact manager for organising and storing contact information. Outlook seamlessly integrates with Microsoft Exchange Server for enhanced collaboration in professional settings. Users can access Outlook through the desktop application, web version (Outlook on the web), or mobile apps, providing a unified and synchronised experience across multiple devices.

Word

Microsoft Word is a word processing software application developed by Microsoft. It is part of the Microsoft Office suite and is widely used for creating, editing, and formatting text documents. Word provides a user-friendly interface with various tools for document creation, including features for text formatting, spell checking, and the insertion of images and tables. Users can choose from a range of templates for different document types, such as letters, reports, and resumes. Microsoft Word supports collaboration, allowing multiple users to work on a document simultaneously and providing commenting and tracking features. It is a versatile and widely adopted tool for individuals, businesses, and educational institutions for creating and managing textual content.

Teams

Microsoft Teams is a collaborative platform developed by Microsoft that combines chat, video conferencing, file storage, and application integration. It is part of the Microsoft 365 suite and is designed to facilitate communication and collaboration within teams or groups of people, whether they are in the same location or distributed across different locations. In Microsoft Teams, users can create channels for different topics or projects,

conduct real-time chat conversations, and hold virtual meetings with video and audio capabilities. The platform also integrates with various Microsoft 365 apps and third-party applications, allowing users to access and collaborate on files, documents, and other content seamlessly. Teams is widely used for remote work, online meetings, and project collaboration, providing a centralised hub for teamwork and communication.

Visio

Microsoft Visio is a versatile diagramming tool that belongs to the Microsoft Office suite, enabling users to create a wide array of visual representations such as flowcharts, organisational charts, and network diagrams. With an intuitive interface and a rich set of templates and shapes, Visio is widely used across various professions, including business, engineering, and project management. Its dynamic linking features and collaborative capabilities make it a powerful tool for conveying complex ideas and processes visually, facilitating effective communication and planning within teams and organisations.

Excel

Microsoft Excel is a powerful spreadsheet program developed by Microsoft. It is a part of the Microsoft Office suite and is widely used for tasks involving data analysis, financial calculations, statistical analysis, and more. Excel provides a grid interface where users can organise data in rows and columns, known as cells. Users can perform various calculations, create charts and graphs, and use a wide range of functions and formulas to manipulate and analyse data. Excel is extensively utilised in business, finance, accounting, and other fields where data management and analysis are essential. Its versatility and user-friendly interface make it a fundamental tool for individuals and organisations to handle numerical data efficiently.

3.1.2 Cisco Jabber

Cisco Jabber is a collaboration platform developed by Cisco Systems that provides a unified communication experience for users within an organisation. It integrates various communication tools and services into a single interface, allowing users to collaborate in real-time. Cisco Jabber typically includes features such as instant messaging (IM), presence information, voice and video calling, desktop sharing, and conferencing. It is designed to enhance communication and collaboration among team members, whether they are in the same office or working remotely. Cisco Jabber is often used in business environments to streamline communication, facilitate quick decision-making, and improve overall collaboration efficiency. It supports integration with other Cisco collaboration solutions and can be deployed on various devices, including desktops, laptops, tablets, and smartphones.

3.1.3 Zoom

Zoom is a video conferencing and online collaboration platform that provides users with the ability to conduct virtual meetings, webinars, and online events. Developed by Zoom Video Communications, the platform allows participants to join meetings from various devices, including computers, tablets, and smartphones. Zoom offers features such as video and audio conferencing, screen sharing, chat functionality, and the ability to schedule and

host virtual events. Zoom is utilised for various purposes, including business meetings, virtual classrooms, social gatherings, and professional webinars.

3.1.4 Plone

Plone is an open-source content management system (CMS) built on top of the Zope application server. It is designed to be a user-friendly and extensible platform for creating and managing websites, intranets, and web applications. Plone incorporates a powerful and flexible workflow, robust security features, and a rich set of built-in tools for content creation, organisation, and publication. As a Python-based CMS, Plone is known for its scalability, customization capabilities, and its focus on providing a secure and user-friendly environment for content administrators. It is widely used in various sectors, including education, government, and non-profit organisations, where a reliable and adaptable CMS is required for managing digital content.

3.2 Specific material

3.2.1 HP - RMN-HSN-141C4 (Elite book)

The laptop given by the UNIGE was specifically configured. It was installed with a special windows ISO, that has all the necessary applications that someone would need to work for Gsent.

4. Conclusion

4.1 Acquired knowledge

4.1.1 Migration of a site and its importance

Website migration is a critical process that should be approached with careful planning and execution. Whether driven by technology upgrades, business changes, or other factors, a well-managed migration is essential to maintaining or improving a website's performance, security, and overall effectiveness.

4.1.2 Discovery of SharePoint & Plone 6.0

In conclusion, of the tasks assigned by my supervisor, I gained a deeper understanding of how SharePoint and Plone are utilised within UNIGE. Through user feedback and independent research, I explored various methods for storing documents and tables. I also delved into differences in security and simplicity between the two platforms. Plone proved to be highly customizable, while SharePoint maintained a more straightforward approach.

4.1.3 Soft Skills

During the enriching span of my 6-month internship at UNIGE, I actively engaged in the application and acquisition of a diverse set of soft skills that have significantly enriched my professional toolkit. These skills weren't confined to formal settings alone, extending beyond meetings and presentations into the my of everyday interactions that have profoundly shaped my professional journey. I extend sincere appreciation for the invaluable support that has been generously provided, acting as a cornerstone in refining my skills and instilling confidence, particularly in navigating various public scenarios.

This internship has proven to be a crucible for personal and professional development, offering a multifaceted learning environment. The exposure to diverse tasks, collaborative projects, and dynamic team interactions has contributed substantially to my growth. As I reflect upon this transformative experience, I am grateful for the opportunities to not only sharpen my soft skills but also to expand my capabilities in areas such as adaptability and communication.

Fundamentally, my internship at UNIGE has served as a pivotal point in my personal and professional journey, fostering a comprehensive path of growth that goes beyond the confines of the professional sphere, profoundly influencing my personal development.

4.2 Thank You

I want to express my sincere appreciation for the invaluable internship experience at the University of Geneva (UNIGE), and I extend special thanks to the Gsent team, the DiSTIC department, and Le CAD. The support and guidance from Gsent have significantly enhanced my understanding of digital services, while collaborating with the DiSTIC department provided me with opportunities for professional growth and development. Additionally, I am grateful for the welcoming atmosphere and insights gained from Le CAD. Each team's mentorship and the inclusive environment at UNIGE have made this internship truly rewarding, and I look forward to applying the knowledge and skills acquired in my future endeavours.

4.3 Conclusions

As I wrap up my internship, I am confident that my comprehensive report has provoked your interest. I need to expand my welcome to encourage discourse and association. On the off chance that you have got any request or in the event that there's a possibility for us to collaborate within the future, if it's not too much trouble do not waver to contact me at Luca.martinet@epitech.eu . The travel amid this internship has been an important learning involvement, and I appreciate the bits of knowledge picked up. I look forward to the potential for progressing collaboration and the chance to investigate unused openings together. Thank you for your time and thought.
