

Personal Experience Report

1st year EPITECH Student

Period	04/10/2022
Promotion	IT 2027
Author	Luca Martinet
Date	21/05/2024

Introduction

During my first year at EPITECH, I had the opportunity to undertake numerous individual and group projects. This report aims to assess the knowledge and skills acquired during this first year at EPITECH.

Projects

Minishell 1 & 2:

Development of a partial "tcsh" type shell with environment management, background task control, and most built-in commands. This project serves as a common thread throughout the first year at EPITECH, consisting of two solo projects completed over the course of just under one month. My tasks focused on recreating the basic tcsh functionalities during Minishell 1 and adding new features during Minishell 2. These projects enabled me to acquire numerous skills, such as mastering the C language and understanding the operation of a shell like tcsh.

MyRPG :

Development of a complete RPG (Role Play Game) video game with an inventory, quests, and interactions with non-player characters. This project also serves as a common thread throughout the first year at EPITECH as part of the graphics programming module, synthesizing the skills acquired through projects like MyPaint, MyRunner, and MyRadar. Developed in a group of 4 over 7 weeks, it is the flagship project of this year, as the module it is part of carries the most weight in terms of credit validation for the year (in terms of ECTS credits). On MyRPG, my tasks focused on implementing the inventory and items. This allowed me to acquire skills in graphics programming using the CSFML library, user interface design, and program memory management. The numerous project presentation sessions also helped me develop public speaking skills, an exercise with which I was initially uncomfortable but became easier over the course of these presentations.

Soft Skills:

During my first year as an EPITECH student, I developed numerous soft skills, thanks to the Reviews, Defenses, and Keynotes that were integral to the curriculum throughout the year. These experiences improved my ability to present in front of an audience, enhancing both my public speaking skills and my overall confidence. Regularly engaging in these activities taught me how to effectively communicate complex ideas while not confusing the listener and respond to questions on the spot. This growth in my presentation abilities has been invaluable, providing a solid foundation for my future.

Conclusion:

In conclusion, this first year at EPITECH was rich in discovery and learning. I had limited technical skills before entering EPITECH, and I am now starting to master several languages and libraries (C, Python, CSFML, JavaScript). These projects have allowed me to discover an appetite for the Software domain, in which I plan to focus on in my future work. To achieve this, I will continue to develop innovative projects in this field, participate in hackathons, and organize events such as workshops and talks. This year has also allowed me to improve my public speaking skills and overcome my shyness to organize such events in the future.
